EXPERIENCE

Technical Lead | Habuild

May 2025 - Present, Bangalore, India

- **Led** a company-wide data-model migration consolidating **3 legacy member tables and 35+ downstream tables across 5 microservices** into a single unified accounts-and-members model — backfilling **5M+ records** with **zero downtime and no data loss** via a phased, feature-flag-gated cutover.
- **Diagnosed and resolved a production outage** from Postgres connection exhaustion on a shared primary crashing ECS tasks across services — rerouted **60–70% of read traffic** to idle replicas overnight, restoring reads to **p50 2–5 ms / p95 15–26 ms**, and extended the same replica pattern to Redis.
- **Designed and shipped** a Lambda-based OTP delivery system with isolated senders per channel (WhatsApp via WABA, SMS via gateway) and per environment — sustaining peak volumes of **~1M+ OTPs** at a **0% system-side error rate** and **97% end-to-end delivery**.
- **Overhauled** the authentication layer and unified registration across all frontends into a single source of truth — eliminating duplicate account creation, closing a **data-exposure risk** in the registration API, and adding a **Redis-backed rate-limiting layer** to secure previously open endpoints.
- **Established** org-wide platform standards as owner of a Docker-based Lambda scaffold, a production-grade NestJS service template, centralized GitHub Actions workflows, and the unified feature-flag platform gating every API rollout.

Software Development Engineer II | Rocketium

July 2022 - April 2025, Bangalore, India

- **Architected** a queue-driven (BullMQ) export pipeline running Puppeteer across **parallel Lambda workers**, sustaining **500K+ creatives/day** across **10+ organizations** with real-time status, retry handling, and stuck-project recovery.
- **Led** remediation of **800+ platform vulnerabilities** to achieve **SOC2 compliance**, and migrated **65+ Lambda functions** (Node.js 14 → 18 → 20) with a custom GitHub Action enforcing IAM on every deployment.
- **Engineered a Brand Safety** system moderating GIFs and videos on Lambda — combining Google Vision for frame-by-frame content analysis with a real-time rules engine enforcing **30+ workspace-specific brand rules** on every creative.
- **Containerized** service deployments (AWS ECS/ECR) and built GitHub Actions CI/CD pipelines, cutting deployment time from **20 minutes to 5 minutes (~75% faster)**.

Software Development Engineer I | Rocketium

May 2021 - July 2022, Bangalore, India

- **Cut** analytics processing from **several minutes to 10–15 seconds** by moving compute-heavy calculations to the backend, powering custom data filters for enterprise clients including **Airtel, ADA, and Rappi**.
- **Developed** a new animation engine on the Web Animations API (WAAP), delivering stable **50+ FPS** playback across browsers and improving render performance by **40%**.
- **Established** CI hygiene across **10+ repositories** (Husky, Commitlint, PR templates, code review) and a unified logging system consolidating frontend and backend data, **resolving 50+ critical on-call issues**.

PROJECT

Nest Pingbot

www.npmjs.com/package/nest-pingbot

- Published nest-pingbot, an open-source NestJS module on NPM that unifies Slack and Discord messaging behind a single sendMessage interface, shipping **8 versioned releases** with **100% TypeScript coverage**.
- Implemented platform-specific capabilities including Slack Block Kit UI, thread replies, Discord embeds, and scheduled delivery, exposed through **3 module registration patterns** for any NestJS app or config setup.

Cortex

github.com/rivetron/cortex

- Built Cortex, a subdomain reconnaissance engine in Golang that aggregates **5 discovery techniques** (DNS brute force, certificate transparency logs, search-engine dorking, third-party APIs, and passive archive collection) into a single scan.
- Engineered a concurrent scanning pipeline with adaptive rate limiting and stealth evasion, auto-generating Markdown reports that break down active/inactive subdomains, per-source statistics, and security recommendations.

EDUCATION

B.Tech in Computer Engineering | Datta Meghe College of Engineering (University of Mumbai)

8.8, Mumbai, India, 2017 - 2021

SKILLS

Languages & Backend: JavaScript, TypeScript, Python, Golang, SQL, NoSQL, Node.js, NestJS, Express, REST APIs, BullMQ, React, event-driven architecture, distributed systems

Cloud & Infrastructure: AWS (Lambda, S3, SNS, ECS, ECR, API Gateway, SQS), Docker, GitHub Actions (CI/CD), Git, PostgreSQL (primary/replica), MongoDB, Redis, BigQuery

Practices & Tooling: Feature flags, rate limiting, SOC2 compliance, observability (SigNoz, New Relic, OpenTelemetry, CloudWatch), testing (Jest, Cypress)
